Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Postman
Type of Testing	Load and Response Time Testing
Target Module / API	Authentication, Loan and Financial APIs
Test Environment	Local Server
Test Date	09 July 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	User Login API	10	30 sec	Fast valid response
2	Add Loan API	20	60 sec	Stable processing
3	Financial Analysis API	30	60 sec	Accurate response
4	Settlement Prediction API	50	120 sec	No failures

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	0.8 sec	Pass	Fast
2	Response Time (Max)	< 5 seconds	2.4 sec	Pass	Acceptable
3	Throughput (Req/sec)	> 10 req/sec	18 req/sec	Pass	Stable
4	Error Rate	< 1%	0.4%	Pass	Low
5	CPU Utilization	< 80%	46%	Pass	Normal
6	Memory Utilization	< 80%	58%	Pass	Stable

Step 4: Observations & Analysis

Key Findings:

[Describe what the test results revealed about your system's performance]

APIs showed stable response times and reliable performance under concurrent requests.

Bottlenecks Identified:

[List any performance bottlenecks observed during testing]

Minor response delay observed during higher concurrent load.

Optimization Steps Taken:

[Describe any changes or optimizations made to improve performance]

Improved API handling, database queries, and backend exception management.

Step 5: Screenshots / Evidence

Attach screenshots of your performance testing tool results below (e.g., JMeter report, Locust graphs, k6 output):
