Project Proposal (Proposed Solution) report

The proposal report aims to transform loan approval using machine learning, boosting efficiency and accuracy. It tackles system inefficiencies, promising better operations, reduced risks, and happier customers. Key features include a machine learning-based credit model and real-time decision-making.

Project Overview	
Objective	To develop an AI-powered platform that helps borrowers analyze financial health, prioritize debts, estimate settlement options, and receive personalized negotiation guidance.
Scope	The project covers borrower profile management, loan tracking, financial health analysis, debt prioritization, settlement prediction, AI-assisted negotiation strategies, letter generation, and financial guidance.
Problem Statement	
Description	Borrowers with multiple loan obligations often lack clear, personalized guidance for debt prioritization, settlement planning, and lender negotiation. Manual financial analysis is complex and time-consuming.
Impact	These challenges increase financial stress, delay debt resolution, and make it difficult for borrowers to take informed recovery decisions.
Proposed Solution	
Approach	Develop a full-stack AI-powered platform that analyzes borrower financial profiles and loan details to provide settlement estimates, debt priorities, and personalized negotiation support.
Key Features	- Financial health and debt stress analysis. - Loan priority and settlement prediction.

	- AI-powered negotiation strategy generation. - Personalized negotiation letter creation.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU requirements	Multi-core processor
Memory	RAM specifications	Minimum 8 GB RAM
Storage	Project files, database, logs	Minimum 10 GB free storage
Software		
Frameworks	Frontend and backend frameworks	React.js, Vite, FastAPI
Libraries	Supporting libraries and tools	Axios, SQLAlchemy, JWT, Werkzeug
Development Environment	IDE and runtime tools	VS Code, Python, Node.js, Uvicorn
Data		
Data	Source, size, format	User-entered borrower profiles and loan records stored in SQLite
